

```

""" CREACION DE DIRECCIONES PARA OBTENER DATOS DE CADA ESTACION """

estaciones=['EMRII1','EMRI2','EMRI3','EMRI4','EMRI5','EMRI7','EMRI8','EMRI10',
            'EMRI11','EMRI13','EMRI15','EMRI17','EMRI18','EMRI19','EMRI20',
            'EMRI21','EMRI23','EMRI24','EMRI25','EMRI27','EMRI28','EMRI29',
            'EMRI30','EMRI32','EMRI33','EMRI34',]

mes='12_DICIEMBRE_2022_PRELIMINAR'

d=[[],[],[],[],[],[],[],[],[],[],[],[],[],[],[],
   [],[],[],[],[],[]]

for i in range(len(estaciones)):
    rutLdLn=('D:\DATOS AEROCIVIL\Informacion_FH\DATOS RUIDO AMBIENTAL\MESES\'
            + mes + '\\Procesado\\'+ estaciones[i] +'\\USERPER.000')
    rutPico=('D:\DATOS AEROCIVIL\Informacion_FH\DATOS RUIDO AMBIENTAL\MESES\'
            + mes + '\\Procesado\\'+ estaciones[i] +'\\LEVELPER.000')
    rutImp=('D:\DATOS AEROCIVIL\Informacion_FH\DATOS RUIDO AMBIENTAL\MESES\'
            + mes + '\\Procesado\\'+ estaciones[i] +'\\USERPER.001')
    rutTerOct=('D:\DATOS AEROCIVIL\Informacion_FH\DATOS RUIDO AMBIENTAL\MESES\'
            + mes + '\\Procesado\\'+ estaciones[i] +'\\USERPER.001')
    d[i].append(rutPico)
    d[i].append(rutImp)
    d[i].append(rutLdLn)
    d[i].append(rutTerOct)

```

Ubicación sencilla (el archivo .py ubicado en la misma carpeta donde están las 26 carpetas de cada estación):

```
""" CREACION DE DIRECCIONES PARA OBTENER DATOS DE CADA ESTACION"""

estaciones=['EMRI1','EMRI2','EMRI3','EMRI4','EMRI5','EMRI7','EMRI8','EMRI10',
            'EMRI11','EMRI13','EMRI15','EMRI17','EMRI18','EMRI19','EMRI20',
            'EMRI21','EMRI23','EMRI24','EMRI25','EMRI27','EMRI28','EMRI29',
            'EMRI30','EMRI32','EMRI33','EMRI34',]

d=[[[],[],[],[],[],[],[],[],[],[],[],[],[],[],[],[],[],
    [],[],[],[],[],[]]]

for i in range(len(estaciones)):
    rutLdLn=(r""+ estaciones[i] + "\\USERPER.000")
    rutPico=(r""+ estaciones[i] + "\\LEVELPER.000")
    rutImp=(r""+ estaciones[i] + "\\USERPER.001")
    rutTerOct=(r""+ estaciones[i] + "\\USERPER.001")
    d[i].append(rutPico)
    d[i].append(rutImp)
    d[i].append(rutLdLn)
    d[i].append(rutTerOct)
```

3. El siguiente paso es correr el script. En la terminal del IDE que se este usando nos indicara las estaciones que cargaron los datos exitosamente, al terminar de compilar los datos de todas las estaciones, el algoritmo realiza las operaciones matemáticas para calcular los indicadores que establecen las normativas, indicadores como: correcciones tonales e impulsivas, LDN, Lpeak, Ld y Ln corregidos y niveles por tercios de octava en ponderación A.

```

Ambient noise processing

This program was designed to organize and perform the processing of environmental noise data from 26 monitoring stations, mainly it takes all the data already compiled and processed in text files and organizes them in dataframes in order to perform the necessary operations for the calculation that are required in the international standards for environmental noise measurement, such as Resolution 0627 of 2006 and the ISO 1996 -1 and ISO 1996 - 2 standards. Below is the step by step of the correct operation of the program:

1. In the first instance, the program must recognize or locate the folders where all the processed files are located and organized by station as follows:
2. Once the folders with the processed .txt files are organized, we have to tell the program where these files are located, the script is separated by functions and sections, in the section called "" CREACION DE DIRECCIONES PARA OBTENER DATOS DE CADA ESTACION "" We edit the variables rutLdLn, rutPico, rutimp and rutTerOct, which contain the path where the processed files are located.
 - Specific location
 - Simple location (the .py file located in the same folder where the 26 folders for each station are):
3. The next step is to run the script. In the IDE terminal that is being used, it will indicate the stations that loaded the data successfully, when finishing compiling the data from all the stations, the algorithm performs the mathematical operations to calculate the indicators established by the regulations, indicators such as: tonal corrections and impulsive, corrected LDN, Lpeak, Ld and Ln, and A-weighted third-octave levels.

4. Once all the processing is finished, the program will create an Excel file with the results of all the stations compiled in the same sheet called "EMRIS" and additionally it will create 26 Excel sheets with the final results of each station.
